Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-3, and 11, drawn to a QAM constellation, classified in class 375, subclass 298.
 - II. Claims 4 and 5, drawn to a transmitter, classified in class 375, subclass 295.
 - III. Claims 6 and 7, drawn to a slicer, classified in class 375, subclass 340.
 - IV. Claims 8-10, drawn to a receiver, classified in class 375, subclass 320.
 - V. Claim 12, drawn to minimizing bit error rate of Trellis code modulation, classified in class 714, subclass 792.
2. The inventions are distinct, each from the other because of the following reasons: Group I refers to a QAM constellation and a QAM constellation labeling method which labels a QAM constellation with regards to a Hamming distance. Group II refers to a transmitter with includes a symbol mapper, a filter, and a demodulator. Group III refers to a slicer which contains look-up tables and a distance calculator to perform the detecting operation. Group IV refers a receiver which includes a demodulator, filter, and a slicer. Group V refers to a method for minimizing bit error for Trellis code modulation.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
